VRR-Series

High Speed/Low Dropout/High Accuracy CMOS Positive Voltage Regulator

■ Description

The VRR Series is a positive voltage regulator where high speed low dropout and highly accurate output were achieved by low current consumption. The output voltage guarantees $\pm 1\%$ within the range of all temperatures by V_{ref} that the temperature characteristic is controlled. It corresponds to the low ESR capacitor as an output stabilization capacitor. The charged ESR capacitor can be discharged with an internal switch by making the $CE=V_{ss}$, as a result the V_{out} quickly returns to the V_{ss} level. To make the current capacity of the output transistor not exceeded, the overcurrent protection circuit is built in.
